Executive Summary

Acme Corp currently handles 12,000+ support tickets per month across email, chat, and phone — with an average response time of 4.2 hours and a customer satisfaction score of 72%. We propose building an AI-powered support platform that will automate 60% of tier-1 tickets, reduce average response time to under 15 minutes, and push CSAT above 90% within 90 days of launch. The platform will integrate directly with your existing Zendesk instance and Salesforce CRM, requiring zero workflow changes from your support team.

The Challenge

Your support team of 18 agents is overwhelmed with repetitive tickets — password resets, order status inquiries, billing questions, and return requests make up 65% of total volume. These are high-frequency, low-complexity issues that consume agent time better spent on complex escalations. Meanwhile, customers wait 4+ hours for answers that could be resolved in seconds. The cost per ticket is \$14.50, totaling over \$2M annually — with most of that spend on issues that don't require human judgment.

Proposed Solution

1. Phase 1: Discovery & Integration

Deep dive into your current support workflows, ticket taxonomy, and Zendesk/Salesforce setup. Map the top 20 ticket categories by volume and resolution complexity. Configure API integrations and establish the AI knowledge base from your existing help center articles and macros.

2. Phase 2: AI Agent Development

Build and train custom AI agents for each tier-1 category — order tracking, password resets, billing inquiries, return processing, and FAQ responses. Each agent uses Claude API with tool_use for reliable action execution (looking up orders, resetting passwords, initiating returns). Includes human handoff logic for edge cases.

3. Phase 3: Testing & Soft Launch

Deploy AI agents in shadow mode alongside human agents for 2 weeks. Compare AI responses against human responses for accuracy, tone, and resolution rate. Fine-tune prompts and escalation thresholds based on real ticket data. Target: 95%+ accuracy before going live.

4. Phase 4: Full Launch & Optimization

Roll out AI agents to handle live tickets with real-time monitoring dashboard. Weekly optimization sprints for the first month — adjusting response quality, adding new ticket categories, and expanding automation coverage from 60% to 75%+.

Timeline

PHASE	DURATION	DATES
Discovery & Integration	2 weeks	May 1 — May 14
AI Agent Development	4 weeks	May 15 — Jun 11
Testing & Soft Launch	2 weeks	Jun 12 — Jun 25
Full Launch & Optimization	4 weeks	Jun 26 — Jul 23

Investment

ITEM	DESCRIPTION	AMOUNT
Discovery & Integration	Workflow audit, API setup, knowledge base	\$8,000.00
AI Agent Development	5 custom agents, prompt engineering, tool integrations	\$32,000.00
Testing & Soft Launch	Shadow mode, accuracy benchmarking, fine-tuning	\$6,000.00
Launch & Optimization	Go-live support, monitoring dashboard, weekly sprints	\$8,000.00
Project Management	Dedicated PM, weekly status calls, documentation	\$4,000.00

TOTAL \$58,000.00

Deliverables

- ✓ 5 production-ready AI support agents integrated with Zendesk
- ✓ Real-time monitoring dashboard with resolution metrics
- ✓ Salesforce CRM sync for customer context on every ticket

- ✓ Human handoff system with escalation rules
- ✓ Knowledge base with 200+ trained response templates
- ✓ Technical documentation and runbook
- ✓ 30 days post-launch support and optimization

Why Choose Us

isibi.ai has deployed AI agents for 15+ companies across support, sales, and operations. Our GoFarther AI platform already handles 25+ tool integrations and processes thousands of automated actions daily. We built the same Claude tool_use architecture we're proposing for you — and we ship fast. Our average project goes from kickoff to production in under 10 weeks.

Terms & Conditions

1. 40% deposit upon signing (\$23,200), 30% at Phase 3 start (\$17,400), 30% on delivery (\$17,400)
2. Proposal valid for 30 days from date above
3. Scope changes beyond the 5 agreed ticket categories will be quoted separately
4. All intellectual property and trained models transfer to Acme Corp upon final payment
5. Monthly AI infrastructure costs (Claude API usage) estimated at \$800-1,200/mo, billed separately
