Active Users

340%

User Growth

72%

30-Day Retention

Executive Summary

Q1 2026 saw 340% user growth, driven by the launch of file creation tools and voice mode. Revenue hit \$48K MRR (up from \$11K in Q4). User retention improved to 72% at 30 days. Three major product launches shipped: structured document templates, AI agents with triggers, and connected app integrations.

Product Launches

Shipped 3 major features: (1) Structured PDF templates for invoices, resumes, proposals — rated 4.8/5 by beta users. (2) AI Agent triggers with email watching and scheduled actions. (3) Connected apps framework supporting Gmail, Outlook, Salesforce, Stripe, and 15 more.

Revenue Breakdown

Subscription revenue accounts for 85% of MRR (\$40.8K), with one-time file generation credits at 15% (\$7.2K). Enterprise pipeline has 4 deals in negotiation totaling \$180K ARR.

Revenue Stream	Jan	Feb	Mar	Total
Subscriptions	\$12.5K	\$13.8K	\$14.5K	\$40.8K
File Credits	\$2.0K	\$2.3K	\$2.9K	\$7.2K
Total	\$14.5K	\$16.1K	\$17.4K	\$48.0K

User Acquisition

Organic (App Store search + word of mouth) drove 60% of new users. Paid acquisition via Instagram and TikTok ads contributed 25%. Remaining 15% from partnerships and referrals.

Channel	Users	CAC	Conversion
Organic	7,440	\$0	4.2%

Paid Social	3,100	\$3.80	2.8%
Referral	1,860	\$1.20	6.1%

Infrastructure

Backend uptime was 99.7%. Average API response time: 1.2s for chat, 18s for file creation. Moved to Render paid tier in February — eliminated cold start issues. Claude API costs averaged \$2,100/month.

Recommendations

1. Double down on organic growth — App Store optimization and content marketing for file creation use cases
2. Launch enterprise self-serve onboarding to convert the 4 pipeline deals faster
3. Add usage analytics dashboard for users to track their AI agent performance
4. Reduce file creation time from 18s to under 10s by implementing streaming + parallel processing

Conclusion

Q1 exceeded targets across all metrics. The product-market fit signal is strong — users who discover file creation and AI agents retain at 2x the rate of chat-only users. Q2 focus should be enterprise conversion and reducing time-to-value for new users.
